

WP7 – Metadata Standards Development

C-G Hjelm

”New” problems

- When the application for DwB was written the discussion was about metadata standards – this is not the case today
- Why are there in some countries a good relation between the NSI and the DA ? – Mainly regarding the metadata for the country
- Metadata for (longitudinal) administrative registers, (Linked) Open Data and “Big Data” in research

What's in common and that's not in common ?

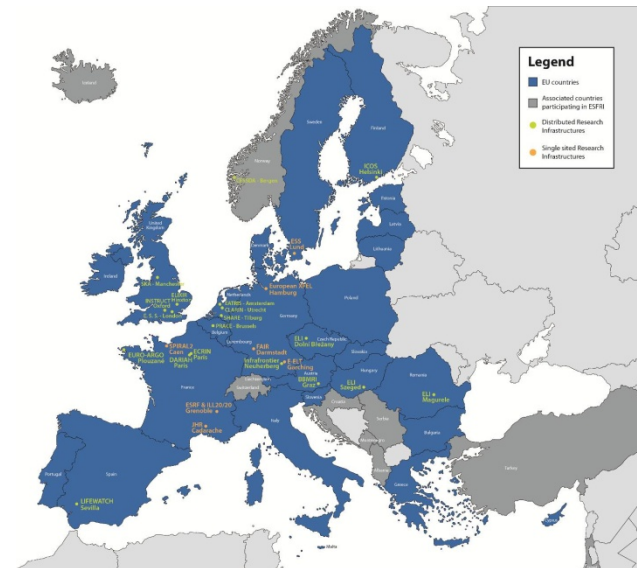

What type of metadata are needed ?

- NSI and metadata – *production of statistics (and in some countries support to researchers)*
- Data Archive and metadata – *often only at the end of a project*
- Researchers and metadata – *for the specified project*

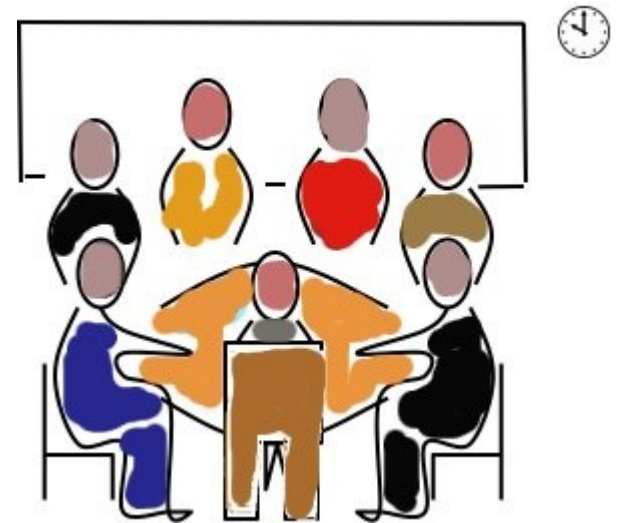

European social science infrastructure needs

- Other European infrastructure projects (without any order)
 - CLARIN
 - DARIAH
 - DASISH
 - iCORDI
 - CESSDA
 - OpenAIRE
 - ... *and many more ...*

Meeting at IASSIST between:

- NSI's
- Data Archives
- Researchers

Questions to discuss

- What's the needs in terms of metadata from a researchers point of view
- What's the lowest common denominator in terms of metadata between these three groups
- Are there any (parts of) standards today that is enough?
- The common ground between the tree groups

Forms for the meeting and the forward process

- Meeting face-to-face at IASSIST
- Mail contact and preliminary report writing
- Preliminary report for review

Time schedule

- Start in April 2013
- Meeting in May 2013
- Report writing
- Preliminary report in October 2013
- Finished in ??
